

Kylynn Rees, OSCP+, eCPPTv2, CRT0

Senior Penetration Tester
Withum
Logan, Utah

Since 2014, Kylynn has been immersed in the IT ecosystem, beginning at a young age by performing systems administration and help desk tasks. As he gained experience, he transitioned into more specialized cybersecurity roles, including in 2021 when he began conducting offensive security assessments for a managed security service provider. While pursuing and earning multiple professional accreditations, Kylynn was hired as a consultant at Withum, where he performed penetration testing. Less than two years later, he was promoted to a senior role and began leading the offensive security team. He has remained in this position, leading hundreds of successful engagements and consistently delivering significant value to his clients. Kylynn has authored over 50 technical write-ups on exploiting various machines and services. He is also an active developer in the offensive security space and currently maintains an exploit search engine designed for penetration testers and security researchers. Kylynn ranks in the top 0.002% on the popular TryHackMe platform, a hacking and training environment with over 3 million users.
